## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 11, 41 – 53 and 67 - 81, drawn to automatic control of iris, stop, diaphragm or filter, classified in class 348, subclass 363 and 360.
- II. Claims 12 – 31 and 54 - 66, drawn to combined automatic gain control and exposure control, classified in class 348, subclass 229.1.
- III. Claims 32 - 40, drawn to color balance (e.g., white balance control), classified in class 348, subclass 223.1.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable in the following reasons:

Invention I has separate utility such as a changing device which changes a state of limitation of the incident light by the iris, which is not required by the inventions of groups II and III.

• Art Unit: 2615

Invention II has a separate utility such as a changing device which changes a gain of output of the light receiving sensor, which is not required by the inventions of groups I and III.

Invention III has a separate utility such as a correction device which corrects white balance of an image, which is not required by the inventions of groups I and II.

See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
